(2) Please replace paragraph [0020] with the following amended paragraph:

[0020] Referring to Fig. 5, the length of the borehole 10 may then be extended in a conventional manner using, for example, a drilling apparatus. In an exemplary embodiment, the coupling of the tubular liner 18 to the second wellbore casing 16 reduces the risk of a collapse of the second wellbore casing during the drilling operation. In this manner, the formation of a mono diameter wellbore casing within the borehole 10 may be provided with a reduced risk of a collapse of the mono diameter wellbore casing. In an exemplary experimental implementation of the present illustrative embodiment, the collapse strength of the combination of the second wellbore casing 16 and the tubular liner 18 was about three and a half times greater than the collapse strength of the second wellbore casing 16 alone.

(3) Please replace the Abstract of the Disclosure, paragraph [0029], with the following amended paragraph:

[0029] ~~A method of forming a mono-diameter wellbore casing.~~ A method of forming a wellbore casing within a borehole that traverses a subterranean formation, that includes: positioning a first wellbore casing within and coupling the first wellbore casing to the borehole; positioning a second wellbore casing within the borehole that overlaps with and is coupled to the first wellbore casing; positioning a tubular liner within the borehole that overlaps with and is coupled to at least a portion of the second wellbore casing; extending the length of the borehole; decoupling the tubular liner from the second wellbore casing and removing the tubular liner from the borehole; and positioning a third wellbore casing within the borehole that overlaps with and is coupled to the second wellbore casing.
